Education

Georgian College - 2015
Computer Programmer/Analyst
With Honours

Interests

Web Security	Board Games
Web Design	Table Top RPGs
UX Design	Video Games

Favourite Games

Puzzle
Myst, Riven
Factory/Automation
Factorio, Satisfactory

Profile

I'm a passionate web developer that enjoys building tools to help others. I am always thinking about how a system can be improved and how to best implement a new feature. I have strong experience with web technologies such as React, and TypeScript, and experience building RESTful backend systems with NodeJS, Spring Boot, and PostgreSQL.

Experience

Sr. Full Stack Developer

OpenText | Waterloo | 2021 - Current

Project Manager for long term products, prioritizing and developing new features while also working on upgrading older systems to newer technologies.

Developed and deployed a centralized developer portal using Backstage. It provided a unified tasks plugin that allowed for seeing everything assigned to a user from accross multiple systems in one place. Created and maintained multiple automation templates that allowed developers to spin up new project, add standardized jobs to their GitLab pipelines, or update configuration to match best practices.

Created a code signing system that allows for centralized signing of application files that integrates with release management systems, and provided secure validation of clients to limit access to the externally valid release certificates.

Tools Developer

OpenText | Waterloo | 2015 - 2021

Reverse engineered databases and wrote scripts to automate the migration of aquisitions to the internal test case management system.

Wrote custom applications to manage syncing data between systems

Created an application that provided a front end to a secrets scanning system to help developers identify and remove sensitive information from code bases.

Worked on maintaining a large Ruby on Rails application that helped mannage manually executed test cases.

Was involved in developing new features, and improving legacy portions of the application.

Life

Outside of work, I often am a Game Master for table top RPGs like Dungeons and Dragons or Pathfinder. I have run 2 long term campaigns, and have started up a new adventure recently with a new group of players.
